Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 June 2002.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

1. The amendment filed 6/18/2002 has been entered.
2. The indicated allowability of claims 1, 6, and 5 is withdrawn in view of the newly discovered reference(s) to Yamada et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1, 5, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamada et al. Yamada discloses an image forming apparatus that includes at least one roll of paper (102) and one sheet of carton (101), a printing unit (2), and a discharged paper stacking unit (301)

Art Unit: 3651

below the printing unit and in a straight line via a paper path from the feeding unit through the printing unit.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 13 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCulley in view of Smedal. McCulley discloses a paper roll attachment for a type writer that includes a sheet feeding area and a plurality of paper rolls arranged obliquely to each other, a printer (D), and a paper discharge area (generally at 19). McCulley discloses all the limitations of the claims, but it does not disclose a sheet feeding area positioned at a height at which a user, who is approximately 170 cm tall, can set up a printing medium without having to bend substantially at the waist when the user is standing erect in front of the printer and standing substantially at ground level, when the printer is placed substantially at ground level. However, Smedal discloses a roll attachment for type writers that includes a frame (5) with a vertical leg (3) adapted to be supported at any elevation (see page 1, lines 85-90), including a height at which a user, who is approximately 170 cm tall, can set up a printing medium without having to bend substantially at the waist when the user is standing erect in front of the printer and standing substantially at ground level, when the printer is placed substantially at ground level, for the purpose of adapting the attachment to any type writing machine (see page 1, lines 15-30). It would have been obvious to a person of ordinary skill in the art at the time of the applicant's

Art Unit: 3651

invention to modify McCulley by utilizing a frame with a vertical leg adapted to be supported at any elevation, including a height at which a user, who is approximately 170 cm tall, can set up a printing medium without having to bend substantially at the waist when the user is standing erect in front of the printer and standing substantially at ground level, when the printer is placed substantially at ground level, for the purpose of adapting the attachment to any type writing machine.

7. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hageman in view of Metzner. Hageman discloses a sheet feeding area which includes a roll of paper (46), a sheet of paper (s), and cover members (45/42). Hageman does not disclose that a single cover member extends linearly from an upstream portion to a downstream portion in which the sheet of paper is fed and the cover member is disposed between the sheet of paper and the roll of paper at a location in the sheet feeding area at which the roll of paper is in a rolled shape. Rather Hageman discloses two separate cover members (45, 42). Cover members (42) have a portion that extends linearly (42) that covers a first feeding path for the roll of paper from above and supports the sheet of paper from below. Additionally, cover members (45) have a portion between the sheet of paper (s) and the roll of paper (46) at a location in the sheet feeding area at which the roll of paper is in a rolled shape. However, Metzner discloses a single cover member (23) that extends linearly from an upstream portion to a downstream portion in which a sheet of paper is fed and the cover member is disposed between a sheet of paper and a feed pack at a location in the feed pack area for the purpose of continuously supporting the paper from the pack to the printing area. It would have been obvious for a person of ordinary skill in the art at the time of the applicant's invention to modify Hageman by utilizing a single cover member that

Art Unit: 3651

extends linearly from an upstream portion to a downstream portion in which a sheet of paper is fed and the cover member is disposed between a sheet of paper and a feed pack at a location in the feed pack area for the purpose of continuously supporting the paper from the roll to the printing area.

Allowable Subject Matter

8. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. Claims 16 and 18 are allowed.

Response to Arguments

10. Applicant's arguments with respect to claims 13, 15, and 17 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
